MOUNTAIN TELECOMMUNICATIONS, INC.

COMPLIANCE REPORT

WC DOCKET NO. 05-196

911 Solution

100% of MTI VoIP subscribers receive 911 services in compliance with the rules established in the VoIP 911 Order. Further, MTI transmits VoIP 911 traffic in the same manner as its landline service by sending all 911 calls to the appropriate PSAP, designated statewide default answering point, or appropriate local emergency authority utilizing the Selective Router, the trunk lines between the Selective Router and the PSAP.

In Arizona there are three selective routers and MTI is connected to all three. Additionally, MTI transmits the caller's ANI and Registered Location to all answering points that are capable of receiving and processing this information. 100% of the answering points within Arizona, our service area, are capable of receiving and processing ANI and Registered Location information that we transmit. 100% of the subscribers' information is being transmitted to answering points that are capable of receiving and processing the information.

Obtaining Initial Registered Location Information:

MTI has nine VoIP subscribers and has obtained Registered Location Information for 100% of these subscribers. In each instance, the initial registered location information was obtained from the subscriber at the time the services were being installed.

Obtaining Updated Registered Location Information:

All MTI VoIP subscribers are T-1 based and can only make changes by ordering such changes through our company. At the time we receive a call from the subscriber that they are making a change, we will update their registered location number

Technical Solution for Nomadic Subscribers:

Not Applicable. MTI service is not nomadic.
